

A Note from Pat Wagner 'The Bee Lady'

I thought I should take time out of my stinging schedule to tell you about this great new product 'Bees in a Bottle' (BIAB). I have been using BIAB for about a year on myself, family and anyone else that stops by the house. It truly works! It's not as potent as bee stings but it doesn't hurt and it feels great! Apply by gently massaging a small amount onto the affected area. BIAB works on any area that you would use an anti-inflammatory drug to relieve pain. **BIAB should be used everyday at least 2 times a day: morning and evening. I have used it sometimes 3 or 4 times a day depending on my aches and pains.** Here are some ways I found that BIAB could be used.

Sinus Problems

Rub on each temple
Rub under each nostril
Rub between eyebrows

Sinus & Cold

Rub on all 3 sinus points plus
rub on chest and throat

Migraines

Rub on each temple

Achy muscles, strains and sprains

Scar tissue – treating old, new or surgery

Arthritis

Sinus and cold

Cold hands or feet

Spider veins

Eczema & Psoriasis

Tight joints & Muscle and joint support

Female – monthly cycle aches

Tendonitis

Migraines

Treating old, new or surgery scar tissue

BIAB is good for treating old, new and surgery scars. Scars cause so many problems in unrelated areas. For example: One young mother was having problems raising her arms over her head and having a lot of fatigue. I stung her arms repeatedly over a period of time with no improvement. Then I decided to sting her cesarean scar, well she was able to raise her arms over her head. She called me later to tell me that she went home and along with her kids cleaned the whole house. This is an example of using the BIAB on a scar in an unrelated place to achieve better health. I feel that deep scarring blocks the nerve connectors. If the scar is gone, nerves can reconnect. I have found BIAB can get rid of the deep scarring underneath the skin. Please continue your vitamins -Vit C up to 6,000mg, B-2 100mg, B-6 100mg because these vitamins make your body make its own steroids.

**SHAKE BOTTLE BEFORE EACH USE
WARM BOTTLE IN GLASS OF HOT WATER OR RUB BETWEEN HANDS
DOES NOT STAIN**

In the year that I have been using Bees in a Bottle I have not seen any adverse reactions in using this product as compared to the bee stings. NO flu like symptoms, hives, itching, rash, swelling, or fevers. So try this product because I believe it will help you just as it has helped me and all the people that have come through my door looking for relief.

Apitherapy yours,

Pat Wagner
